DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Drawings

2. The drawings are objected to because the lines and fonts are not uniform size and widths. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-3 are rejected under 35 U.S.C. 101 because the claimed invention lacks patentable utility. The claimed method of computing is a mere manipulation of data via mathematics analysis and; therefore, there is no practical application or practical result claimed. Thus, claims 1-3 result in no useful, concrete, and tangible application.

Allowable Subject Matter

5. Claim 4 is allowed.
6. The following is a statement of reasons for the indication of allowable subject matter:

In regard to claim 4, the prior art does not disclose a digital camera with the combination of limitations specified in the claimed invention, specifically the limitations of:

(b) parallel processing circuitry coupled to said zoom selection input and operable to resample an image by (1) providing filter coefficients according to a resampling ratio dependent upon an input zoom selection, said coefficients grouped into sub-filters according to filter phase and corresponding to a data access block; (2) for each of a plurality of architecture kernels of said parallel processing circuitry (i) provide a step per group of said sub-filters from a first set of integers corresponding to the height of said architecture kernel and said resampling ratio, (ii) for each of said steps from said first set, find a length for said sub-filters according to an access coverage chart for said data access

block; and (3) using the architecture kernel and the step corresponding to a minimum of said lengths of step (b)iii) to filter said image, as stated in claim 4.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6,239,838, discloses a camera with parallel processing for the digital zoom.

US 7,119,845, discloses image resizing through resampling through poly-phase filtering.
